PROFESSIONAL SUMMARY

Full-stack developer skilled in Flutter, React, Node.js, and Firebase. Experienced in building responsive UIs, scalable backend services, REST APIs, and ML-enabled applications from design to deployment.

EDUCATION

Zeal College of Engineering & Research

Bachelor of Engineering in Computer Engineering – SGPA: 8.48

Pune, Maharashtra

Nov 2022 – Jun 2026

- Coursework: Data Structures, Analysis of Algorithms, Operating Systems, AI, ML, Networking, Databases

TECHNICAL SKILLS

Programming Languages: Dart, C++, Java, Python, JavaScript, SQL

Frontend Development: React.js, Flutter, HTML5, CSS3, Material UI

Backend & Databases: Node.js, Express.js, Firebase (Auth, Firestore), MongoDB, MySQL, SQLite

Machine Learning: Linear Regression, Flask API, Model Deployment, Data Preprocessing

Tools & Platforms: Git, GitHub, Google Cloud Platform, WordPress, Linux, Windows

Soft Skills: Leadership, Event Management, Time Management, Cross-functional Collaboration

PROFESSIONAL EXPERIENCE

Flutter Developer (Internship)

Incubator Inc.

Aug 2024 – Oct 2024

Pune, Maharashtra (On-site)

- Built apps with Firebase authentication and real-time updates.
- Implemented provider-based state management to reduce UI rebuilds.
- Developed admin dashboard with secure role-based access
- Integrated Firestore rules improving data security and consistency.

Frontend Developer (React Developer Internship)

Techlathe IT Solutions

Aug 2024 – Oct 2024

Remote

- Built responsive UI components using React and Material UI.
- Worked with REST APIs for authentication and dashboard data.
- Collaborated via Git branching, code reviews, and pull requests.

PROJECTS

Canteen Mate | Flutter, Firebase, Firestore, REST Architecture – [Link](#)

2025

- Designed and developed an end-to-end food ordering system with separate user and admin workflows.
- Implemented Firebase Authentication, role-based access, and Firestore-backed order management with real-time updates.
- Optimized data reads using structured collections and indexes, improving response time and scalability.
- Handled session persistence and local caching using SharedPreferences.

URL Shortener | Node.js, Express.js, REST APIs, System Design – [Link](#)

2025

- Built a RESTful URL shortening service supporting short-code generation and redirection logic.
- Implemented collision-free ID generation and validation for high-volume URL creation.
- Designed modular controller-service architecture for scalability and future analytics integration.
- Handled edge cases such as invalid URLs, duplicate entries, and expired links.

Car Price Prediction System | Python, Machine Learning, Flask API – [Link](#)

2025

- Developed a machine learning pipeline using Linear Regression to predict car prices from structured datasets.
- Performed data preprocessing including feature encoding, normalization, and missing value handling.
- Deployed the trained model behind a Flask REST API to serve real-time predictions.
- Structured the project for reproducibility with separate data, model, and inference layers.

Movie Recommendation System | Python, NLP, Cosine Similarity, TMDB API – [Link](#)

2026

- Implemented a content-based recommendation engine using bag-of-words and cosine similarity.
- Processed textual metadata to generate similarity matrices for efficient recommendation lookup.
- Integrated TMDB API to fetch dynamic movie metadata and posters.
- Focused on algorithmic efficiency and modular design for future scaling.
